

# 3:e Sprint

Sprint starts: Tuesday, 4/10, Lv6

Sprint ends: Tuesday, 11/10, Lv7

---

## Sprint Planning

### Remaining tasks from last sprint:

- All three tasks from the profile page story (not much remaining on each, though)
- Being able to send and receive messages from the server.
- Make the matching button add a real person instead of a dummy person. Only match people with AS profiles with SSP profiles. (Breaking this down into several tasks)

### User Stories to do this sprint(User stories divided into tasks in Trello):

We will continue with our current user stories since we have not finished them yet. we will reevaluate our user stories on thursday again.

User Stories distribution on thursday:

Raha&Jennifer: As a non English speaking user I want to be able to change the application language so that I can understand the text in the application. [13]

Elin&Johan: As a user I want to get some information the first time I successfully get a match. [5]

Elin&Gustav: As a user I want to be aware of my progress during the introductory questionnaire. [8]

Johan&Gustav: As a user, I'd like the title on the top of the screen to reflect what kind of screen I'm on so I can easier know where I am in the app. [5]

John: As a user I want to be matched based on my profile. [13]

Elin: As a user I want to be able to choose a job category that suits me and an interest that I have. [3]

Elin: As a mentor/student, I want to know what is expected of me when I use the app. [5]

Gustav&Johan: As a user, I want to be able to remove contacts that I've matched with from my contact list. [8]

Our velocity for this sprint is: 60

---

## Sprint Review

We have implemented the following tasks:

R&J: Language can be changed in the first setup and also in settings, started text translation.

J: Matching based on profession, if the user is searching for a match and whether you're registered as a mentor or student.

G&J: Contacts can now be deleted, both from the contacts list and from individual chats. The chat is now also made a bit prettier.

E&J: Made a small dialog appear the first time a user finds a match, explaining what to do next.

G&E: The initial questionnaire now has a progress indicator. It shows how many pages there are in total, and which one you're at right now.

E: Added a text that explains what is expected of the user.

---

## Sprint Retrospective

### 1. How did it go working with our tasks in the last sprint?

#### a. What went well?

- Overall it went better to set points for user stories

#### b. What went less well?

- Unexpected reconstruction of the Preference-activity, because how the settings value is saved.

### 2. Of what went less well, how will we improve it?

No real improvement for said problem

### 3. Something special someone learned that would be good to share with the rest of the team?

You can assume that asyncTasks is done with what they are doing when you start execute().
