3:e Sprint

Sprint starts: Tuesday, 4/10, Lv6
Sprint ends: Tuesday, 11/10, Lv7

Sprint Planning

Remaining tasks from last sprint:
- All three tasks from the profile page story (not much remaining on each, though)
- Being able to send and receive messages from the server.
- Make the matching button add a real person instead of a dummy person. Only match people with AS profiles with SSP profiles. (Breaking this down into several tasks)

User Stories to do this sprint(User stories divided into tasks in Trello):

We will continue with our current user stories since we have not finished them yet. we will reevaluate our user stories on thursday again.

User Stories distribution on thursday:
R&J: As a non English speaking user I want to be able to change the application language so that I can understand the text in the application. [13]
E: As a mentor, I want to know what is expected of me when I use the app. [1] & As an asylum seeker, I want to know what is expected of me when I use the app. [1]
G&J: As a user, I want to be able to remove contacts that I've matched with from my contact list. [8]

Our velocity for this sprint is: 60

Sprint Review

We have implemented the following tasks:
R&J: Language can be changed in the first setup and also in settings, started text translation.
J: Matching based on profession, if the user is searching for a match and whether you're registered as a mentor or student.
G&J: Contacts can now be deleted, both from the contacts list and from individual chats. The chat is now also made a bit prettier.
E&J: Made a small dialog appear the first time a user finds a match, explaining what to do next.

G&E: The initial questionnaire now has a progress indicator. It shows how many pages there are in total, and which one you're at right now.
E: Added a text that explains what is expected of the user.

Sprint Retrospective

1. **How did it go working with our tasks in the last sprint?**
   a. **What went well?**
      - Overall it went better to set points for user stories

   b. **What went less well?**
      - Unexpected reconstruction of the Preference-activity, because how the settings value is saved.

2. **Of what went less well, how will we improve it?**
   No real improvement for said problem

3. **Something special someone learned that would be good to to share with the rest of the team?**
   You can assume that asynctasks is done with what they are doing when you start execute().
